Full Platform Audit Report

Bugs · UX/UI Analysis · KPI Framework · Image & Prompt Flows
Design Strategy · Feature Requirements · Development Roadmap

Prepared for: Coritiba FC — Commercial & Development Teams

Scope: All platform modules — complete button-by-button + KPI audit

Commercial Intelligence & Sponsorship Platform · June 2026 · Confidential

13 Bugs Confirmed · 10 Feature Requests · 30+ Missing KPIs · 4-Sprint Roadmap

Table of Contents

Section	Topic
1	Executive Summary — Current State & Urgent Priorities
2	Critical Bugs [P0] — 8 Workflow-Stopping Issues
3	High-Impact Bugs [P1] — 4 Significant Friction Points
4	Medium Bugs [P2] — 1 Data Quality Issue
5	UX/UI Deep Analysis — Design, Flows, Mockup Editor, Image Gen, Email, Landing Page
6	Complete KPI Framework — 30+ Missing KPIs, Filters, Exports, Labels
7	Feature Requests FR-01 to FR-10 — Full Requirements & Free Tools
8	New Features — A/B Testing, PDF Deck, Versioning, WhatsApp, Contracts
9	Design Improvement Strategy — Color System, Typography, Free Toolchain
10	Development Roadmap — 4 Sprints, 12 Weeks, Full Team Plan
11	Landing Page Best Practices Checklist — 25 Items, All Currently Failing
12	Priority Summary Tables — Bugs, Features, KPIs, Roadmap
13	Pipedrive MCP Integration — Full Functionality & Sponsorship Workflows
14	Newsletter Module — Full Requirements, KPIs & Architecture

SECTION 1 — EXECUTIVE SUMMARY

Platform Overview

The Coritiba FC Commercial Intelligence & Sponsorship Automation Platform is an internal tool for the club's 5–10 person commercial team to send sponsorship proposals, manage barter and Lei de Incentivo deals, renegotiate contracts, and run email outreach to potential sponsors. It currently manages 536 target companies, 126 proposals, and 161 AI-generated campaigns.

Critical Alert — Action Required Immediately

Issue	Status	Impact
Gmail OAuth token expired May 22, 2026	NOT FIXED	All outbound emails silently failing — team may not know
Pipedrive sync: 0 synced, 35 pending	NOT FIXED	CRM completely disconnected from platform
28 image jobs stuck in 'Generating'	NOT FIXED	Image generation backlog blocking new jobs
0 of 25 landing page checklist items met	NOT FIXED	Every sponsor sees a broken/unprofessional page
Pipeline page: 0 active leads	NOT FIXED	536 companies, 126 proposals — none appear in pipeline

Issue Count Summary

Category	Count	Status
P0 Critical Bugs — workflow-stopping	8	Fix before any production use
P1 High Bugs — significant friction	4	Fix in Sprint 1
P2 Medium Bugs — data quality	1	Fix in Sprint 2
Feature Requests — confirmed by team	10	Prioritized in roadmap
New Feature Suggestions	5	Sprints 3–4
Missing KPIs on dashboard	28+	Redesign in Sprint 2
Landing page checklist items failing	25 of 25	Redesign in Sprint 3
Workflow steps currently broken	6 of 10	Sprints 0–1 to fix

The 5 Most Urgent Problems Right Now

1. Gmail OAuth expired May 22: Every email sent since May 22 may have failed silently. The team may believe emails were sent when they were not. Reconnect immediately in Settings → Sender Configuration.
2. Edit button on proposals routes to wrong page: The Edit button opens the mockup editor instead of the proposal editor. The team cannot update any proposal. Fix: 30-minute code change.
3. Bulk campaigns fail 100% of the time: English labels vs Portuguese database — every bulk campaign attempt fails. The highest-leverage outreach feature is completely broken.

4. Every outbound email is broken and unprofessional: [Nome] renders literally; zero links; no CTA; no images. Every email is a dead end that makes the club look unprofessional.
5. Every sponsor who clicks a proposal link sees an admin tool: The /view page (sent to sponsors) shows the full internal sidebar. This is a security and credibility crisis.

End-to-End Workflow Status: 6 of 10 Steps Fail

Step	Action	Status	Bug
1	Identify target company (search /companies)	OK	—
2	Enrich company data + save contacts	BROKEN — contacts not saveable	BUG-11
3	Review competitor sponsors	PARTIAL — no Add to DB	BUG-12
4	Create marketing campaign	BROKEN — company selector unusable at 300+ co.	BUG-14
5	Build proposal (wizard)	OK	—
6	Generate AI images/creatives	BROKEN — no prompt preview, 28 stuck	BUG-08
7	Review and approve content	BROKEN — approvals page empty	BUG-04
8	Edit proposal content	BROKEN — Edit button wrong route	BUG-01
9	Send email to sponsor	BROKEN — [Nome] literal, no link, no CTA	BUG-09/10
10	Sponsor views proposal	BROKEN — admin sidebar + no CTA	BUG-15

6 of 10 steps fail. The platform cannot complete a sponsorship send end-to-end.

SECTION 2 — CRITICAL BUGS [P0] · 8 Issues · Fix Before Any Production Use

P0 bugs stop the workflow completely. Nothing else should be built until these are fixed.

BUG-01P0/proposals/{id}

Edit button routes to /mockup-editor instead of /proposals/{id}/edit

What the user wants to do: Open a proposal and click Edit to update content, pricing, or inventory before sending.

What actually happens: Browser navigates to /mockup-editor — the logo placement canvas — not the proposal text editor. The correct /proposals/{id}/edit route exists and works. The button simply points to the wrong URL.

Business impact: The team cannot update any proposal after creation. If a prospect asks for a revised offer, the team is stuck. This makes the platform useless for negotiation.

Fix required: Change the Edit button href from /mockup-editor to /proposals/\${id}/edit in the proposals list and detail components. Verify the edit route loads correctly.

Estimated effort: 30 minutes

BUG-03P0/campaigns/bulk

Bulk campaigns fail 100% — English form labels vs Portuguese database values

What the user wants to do: Select an industry in Bulk Campaigns and click Generate to create and send campaigns to all matching companies.

What actually happens: The form uses English labels (Automotive, Food & Beverage). The database stores Portuguese values (Automotivo, Bebidas/FMCG). Every filter returns zero results. No individual company search exists — with 300+ companies, finding one manually is impractical.

Business impact: Bulk outreach is the highest-leverage feature in the platform. If the team can't reach 50 companies at once, they default to spreadsheets and Gmail — defeating the entire purpose.

Fix required: Audit all filter values in the bulk campaign form. Map English labels to Portuguese DB values (or standardize to English throughout). Add a live company name search box that filters results in real time. Show a 'Companies matched: X' counter before generating.

Estimated effort: 1–2 days

BUG-08 **P0** **/proposals/{id} — Visuals****Generate Creatives fires immediately with no prompt shown; 28 jobs stuck forever**

What the user wants to do: Click Generate Creatives on a proposal to create AI-generated images — jersey mockups, LED board visuals, social media creatives.

What actually happens: The button immediately fires an AI job with no prompt review, no style controls, and no confirmation. The user has no idea what the AI will generate. Additionally, 28 jobs are stuck in Generating with no progress indicator, no cancel button, no retry, and no error message — appearing permanently frozen.

Business impact: The team wastes AI generation credits on unreviewed prompts. The image generation page is cluttered with 28 broken jobs. New jobs may queue behind them. Without working image generation, proposals lack visuals — a key conversion driver.

Fix required: Add a prompt review modal between button click and job dispatch: show auto-generated prompt, allow editing, require Confirm & Generate. Add 5-minute job timeout: mark timed-out jobs as Failed. Add Cancel button on in-progress and Retry on failed jobs. Mark the 28 stuck jobs as Failed in the database immediately.

Estimated effort: 2–3 days

BUG-09 **P0** **/emails/{id}****[Nome] placeholder renders literally — contact name never injected into emails**

What the user wants to do: Send a personalized outreach email expecting the recipient to see their name at the top.

What actually happens: The email arrives with the literal text [Nome] instead of the contact's name — for example: 'Olá, [Nome], temos uma oportunidade especial...' The merge system failed to replace the variable with real data.

Business impact: In a B2B sponsorship context where deals are worth R\$50,000–R\$500,000+, a broken personalization tag tells the prospect the club is using a broken automated tool. It ends conversations before they start.

Fix required: Before any email send, run a validation pass checking for unresolved placeholders matching [*] or {{*}}. Block the send and show an error if any are found. Fix the template variable substitution to correctly inject contact name, company, and sender name from the contacts and team tables.

Estimated effort: 1 day

BUG-10 **P0** **/emails/{id}****Outbound emails have zero links, no images, and no CTA button**

What the user wants to do: Send a sponsorship proposal email so the recipient can click to view the full proposal.

What actually happens: The email body is plain text only — no link to the proposal, no View Proposal CTA button, no images, no branding. The recipient receives a wall of text with no way to take action.

Business impact: A sponsorship email with no link is a dead end. The prospect cannot view the proposal, cannot schedule a meeting, and has no conversion path. Every email sent in the current state wastes the team's effort and the prospect's attention.

Fix required: The email template must automatically include a View Proposal / Ver Proposta button linking to /view/{proposal_id}. Add the CFC logo as a header image. Build a proper HTML email template (React Email or MJML) with: header, greeting, body text, proposal summary card, CTA button, footer with contact info.

Estimated effort: 2–3 days

BUG-11 **P0** **/companies/{id} — Contacts tab**

Hunter.io and Apollo contacts found but no Save or Add button — data lost on page leave

What the user wants to do: Search for contacts at a target company using Hunter.io/Apollo, then save the found emails and names to the company's CRM record.

What actually happens: The search returns contacts (10 confirmed for Ambev Brasil) but there is no Save, Add, or Import button anywhere on the page. Navigating away loses all results. The user must start over next time.

Business impact: Hunter.io and Apollo API calls cost money or consume monthly quota. If found contacts cannot be saved, the team wastes credits and has no email addresses for outreach — breaking the entire campaign flow.

Fix required: Add a Save button per contact row and Save All at the top of results. On click, create a contact record (name, email, title, source) linked to the company. Show a green Saved badge on already-saved contacts. Persist results in session so a brief scroll does not lose them.

Estimated effort: 1-2 days

BUG-IMAGES **P0** **/proposals — Bulk Approve**

Bulk Approve shows Sem img placeholders everywhere — no image management tools

What the user wants to do: Open Bulk Approve to review AI-generated creatives before approving proposals for send.

What actually happens: Every image slot shows Sem img (No image). Images either failed to load or were never linked. There are no image management tools anywhere: no upload area, no browse view, no way to assign images to proposals or campaigns.

Business impact: Visual creatives — jersey mockups, LED boards, social posts — are central to a modern sponsorship proposal. Without working image management, proposals go out without visuals, dramatically reducing their persuasive impact and conversion rate.

Fix required: Debug why generated images are not appearing (check DB image URL storage after generation completes). Build an image workspace: grid view of all generated images, sortable by proposal/campaign/date/status. Add Approve, Reject, and Assign to Proposal on each image card. Add manual image upload.

Estimated effort: 3-5 days

BUG-15 **P0** **/proposals/{id}/view**

Sponsor landing page shows full admin sidebar and has no CTA — a security and credibility crisis

What the user wants to do: Send a proposal link to a potential sponsor expecting them to see a professional presentation of the partnership opportunity.

What actually happens: The page renders with the complete admin sidebar visible — internal navigation items like Companies, Campaigns, Settings are all shown to the sponsor. There is no CTA, no proposal summary structure, and no way for the sponsor to take action. The page looks like an internal tool that was accidentally shared.

Business impact: This is the most visible external-facing bug. Every sponsor who receives a proposal link sees this broken page. It destroys professional credibility and creates a security concern — sponsors can see and potentially interact with internal navigation. In a R\$200,000/year deal context, this is a dealbreaker.

Fix required: Render /view without the admin layout wrapper. Apply a separate public layout with no sidebar, no internal navigation. Add at minimum a Tenho Interesse / I'm Interested CTA button that opens a contact form. Full redesign per Section 5.7 to follow in Sprint 3.

Estimated effort: 1–2 days emergency fix, 5–7 days full redesign (Sprint 3)

SECTION 3 — HIGH-IMPACT BUGS [P1] · 4 Issues · Fix in Sprint 1

BUG-04 P1 /approvals

Approvals page is completely empty despite 167 items existing in the queue

What the user wants to do: Open the Approvals page to review and approve proposals, emails, and creatives before they go out.

What actually happens: The page shows nothing. No items appear, even though 167 items exist in the queue (visible when the filter is removed). Likely a query filtering on a status value or user ID that does not match what is stored. Dashboard shows 15 pending but queue shows 167 — a severe data inconsistency.

Business impact: Without an approvals workflow, senior staff cannot control quality before outreach goes out. Junior team members can send unapproved, incorrect, or incomplete proposals.

Fix required: Debug the approvals query — likely a PT/EN status value mismatch (see BUG-03) or a user permission filter that excludes most items. Fix the filter condition. Add an empty state message (No items pending approval) so the page never appears blank — it should explain why it is empty.

Estimated effort: 4 hours

BUG-06 P1 /pipeline, /crm-sync

Pipedrive CRM: 0 synced, 35 pending — integration broken and pipeline shows zero activity

What the user wants to do: Use Pipedrive as the CRM for deal tracking. Expect deals, contacts, and pipeline stages to sync automatically.

What actually happens: 35 records are stuck in pending. 0 have synced successfully. The pipeline board shows 0 Active Leads, 0 Won Deals, and no pipeline value — despite 126 proposals and 536 companies in the platform.

Business impact: Without Pipedrive sync, the team must maintain two systems manually. Pipeline visibility is split. The platform's pipeline view is completely useless. Missed follow-ups and duplicated work result.

Fix required: Check the Pipedrive API token — likely expired or revoked. Review sync job logs for error messages on the 35 pending records. Fix root cause (expired token or field mapping mismatch). Re-queue pending records. Add a Last synced: X minutes ago indicator and a Sync Now button on the dashboard.

Estimated effort: 1-2 days

BUG-12 P1 /companies/{id} — Competitors tab**Competitors tab has no Add to Database button — intelligence is dead-end and not actionable**

What the user wants to do: Research which brands sponsor competing clubs, then add those brands as prospects in the CRM.

What actually happens: The Competitors tab displays competitor data and their sponsors but has no Add to Database, Add as Prospect, or any action button. The information is read-only.

Business impact: Competitor sponsor research is a key sourcing technique — companies spending on football at other clubs are proven buyers. If found companies cannot be added as prospects, the team must manually recreate each record, reducing the likelihood they act on the intelligence.

Fix required: Add an Add to My Database button per row. On click, check for duplicates by company name or CNPJ. If new, create a record with Status: Prospect, tag it Competitor Sponsor — [Club Name], and pre-fill available fields. If already exists, show a notification and link to the existing record.

Estimated effort: 1 day

BUG-14 P1 /campaigns**Campaign company selector has no search — 300+ companies require manual scrolling**

What the user wants to do: When creating a campaign, select which companies to target.

What actually happens: The company selector is a flat dropdown with 300+ companies and no search input. Finding a specific company requires scrolling through the entire list, which takes several minutes and is highly error-prone.

Business impact: At 300+ companies, an unsearchable list is unusable. Team members avoid using the campaign feature entirely, defaulting to less effective methods.

Fix required: Add a text search input to the company selector. Filter the list in real time as the user types. Add filter chips for Industry, City, and Status. Show a count of selected companies as the user builds the target list.

Estimated effort: 4–8 hours

SECTION 4 — MEDIUM BUGS [P2] · 1 Issue · Fix in Sprint 2

BUG-13 P2 /companies/{id}

Industry field not editable inline — no auto-labeling on company creation

What the user wants to do: Update the industry classification of a company record directly from the company detail page.

What actually happens: The Industry field is read-only inline. The user must open a separate edit form, scroll to the field, change it, and save — a multi-step process for a one-click change. There is also no auto-labeling: when a new company is added, the system does not suggest an industry based on its domain, name, or LinkedIn data.

Business impact: With 300+ companies and many missing or incorrect industry labels, bulk outreach campaigns cannot be segmented accurately. Poor industry data leads to irrelevant targeting and wasted AI generation credits.

Fix required: Make the Industry field click-to-edit inline on the company detail page — on click, replace the text with a searchable dropdown. When a company is added via Hunter.io, Apollo, or manually, auto-suggest an industry category based on domain/name/LinkedIn data and let the user confirm or override.

Estimated effort: 1–2 days

SECTION 5 — UX/UI DEEP ANALYSIS

5.1 Overall Design Problems

- Visual hierarchy: Every element has the same visual weight. Primary action buttons look identical to secondary and destructive ones. Users cannot identify the most important action on any page.
- Color usage: Colors are used inconsistently — yellow means warning on one page, brand accent on another. Green is used for both success states and background color. Users cannot rely on color to read record states at a glance.
- Typography: Font sizes vary page to page with no hierarchy. Page titles, section headers, and body text are sometimes the same size. Poor contrast in some areas fails basic accessibility standards.
- Spacing: Most layouts are cramped. Tables have insufficient row height. Cards have minimal padding. Dense information blocks cause fatigue in long sessions.
- Navigation: The sidebar has 20+ items at the same level with no grouping. A new team member has no way to understand the platform structure. Finding image generation or the mockup editor requires scanning the entire list.
- Empty states: When a page has no data it shows a blank white area — no message, no guidance, no call-to-action. This causes users to believe pages are broken (as with the Approvals page, BUG-04).
- Loading states: Most actions have no loading indicator. After clicking Generate Images or Send Email, the user sees no feedback until the result appears — or doesn't. Users click buttons multiple times thinking nothing happened.
- Form validation: Forms do not validate fields inline. All errors appear only after form submission, requiring users to scroll back and fix issues that could have been caught earlier.

5.2 Dashboard UX Problems — What Is Missing

The dashboard shows 6 KPI cards: Active Companies, Overdue, Generating (images), Pending Approvals, Follow-ups, System Status. These are generic operational counts — they tell the team what is happening right now but give zero insight into whether the commercial program is succeeding. Critically, the Gmail OAuth expiry (active since May 22) is not shown anywhere on the dashboard.

Dashboard Problem	Business Impact
No trend indicators on KPIs (up/down vs last week)	Team cannot tell if things are improving or getting worse
No date range selector	All numbers are all-time totals with no period context
Gmail OAuth expiry not shown as alert	Team may believe emails are being sent when they are not
No revenue or pipeline value shown	The most important commercial number is invisible
Recent proposals not color-coded by status	User must read every row — cannot scan at a glance
Recent emails show no open rate	No way to know if outreach is working
No 'Needs Your Attention' section	Critical alerts (overdue follow-ups, stuck jobs) buried or missing
Dashboard count inconsistency (123 vs 126 proposals)	Data trustworthiness undermined

5.3 Proposal Flow UX Problems

- No step indicator in proposal creation: User does not know how many steps remain or where they are in the process
- Edit button routes to wrong page (BUG-01): Users hit an immediate dead end when trying to modify any proposal
- No version history: Cannot answer 'what changed from the last version?' when a sponsor asks
- No working Preview as Sponsor button: BUG-15 means the /view page is broken — team cannot check how sponsors see proposals
- No proposal activity timeline: Cannot see when proposal was created, sent, viewed, or followed up
- Generate Creatives fires without confirmation: Wastes AI credits, no quality control before generation (BUG-08)
- Status changes are silent: When a proposal moves from Draft to Sent, nothing confirms it happened and no timestamp is recorded

5.4 Image Generation (AI) Flow — Redesign Required

Current problems with the image generation flow:

- Clicking Generate Creatives immediately fires a job with no prompt shown, no style controls, no confirmation
- 28 jobs stuck in Generating with no cancel, no retry, no error message — they appear permanently frozen
- The job list has no filtering by proposal, campaign, or company — flat list of all 87 jobs
- No prompt library — the same prompts get rewritten every time, with no institutional knowledge built up
- No way to rate, favorite, or approve individual generated images
- No style controls (photorealistic vs illustrated, stadium atmosphere vs lifestyle, format selector)
- Approved images are not automatically linked to the proposal they were generated for
- No A/B generation option — cannot create 3 variations of the same prompt for comparison
- No model selector — DALL-E vs FLUX LoRa not user-selectable despite both existing in the system

Redesigned Image Generation Flow — 6 Steps:

S t e p	Action	UI Elements Required
1	User clicks Add Creatives on proposal page	Button labeled Add Creatives (not Generate) — signals deliberate, reviewable action
2	Prompt Review Modal opens BEFORE anything is generated	Campaign brief summary (auto-filled) · Editable prompt field · Style selector · Format selector · Quantity (1/3/5) · Save prompt to library checkbox
3	User reviews and edits prompt	Editable textarea · Prompt Library panel (slides in) showing saved prompts with ratings · Character counter
4	User clicks Generate — per-image progress shown	Progress bar per image · Estimated time shown · Cancel All button during generation
5	Results grid shown for review	Image grid · Per image: Approve / Regenerate / Download / Delete · Approved badge · Counter: Approved X/Y generated

S t e p	Action	UI Elements Required
6	Approved images auto-attach to proposal	No manual step — images appear in Creatives section of proposal and on sponsor landing page automatically

Prompt Library: A dedicated page listing all saved prompts with: text, style tag, times used, rating, last used date. Team builds a library of 20–50 proven prompts over time.

5.5 Mockup Editor (Non-AI) — Current Problems & Redesign

- BUG-01 sends users here by mistake when they wanted to edit a proposal — users arrive confused
- Templates listed as text names only — no thumbnail preview before selection
- Two logo input methods (URL field + file upload) with no explanation of which takes priority
- No undo/redo — any mistake requires starting over from scratch
- No zoom controls — editing small placement zones is inaccurate
- No alignment guides or snap-to-grid — logo placement is imprecise
- Placement zone labels (Inside, Positive, Nature) are unclear — what do these mean?
- Canvas is 400×500px — too small for production-quality output
- No one-click export to proposal — user must manually save, download, and re-upload
- Only 5 templates — missing OOH billboard, press backdrop mobile, digital banner, video thumbnail

Redesigned Mockup Editor requirements:

Feature	Requirement
Template Gallery	Full visual grid with thumbnails before selection, organized by category (Jersey/Stadium/Social/Digital/Print)
Canvas improvements	Drag-and-drop logo placement · Undo (Ctrl+Z) / Redo (Ctrl+Y) · Zoom In/Out · Alignment guides and snap-to-grid
Placement zones	Clear text labels with tooltips explaining each zone (e.g., 'Inside: visible during match broadcasts') · Active zone highlighted
Logo input	Unified single input — file upload takes priority over URL. Immediate preview of loaded logo.
Export options	Preview at Output Size · Export to Proposal (PNG auto-attached) · Export All Templates (ZIP or bulk attach to proposal)
Templates	Add: OOH Billboard · Press Backdrop · Digital Banner (728×90) · Social Story (9:16) · Video Thumbnail · Scoreboard

5.6 Email Composer UX Problems

Problem	Impact
Plain text editor only — no WYSIWYG, no images, no buttons	Emails look unprofessional; no way to embed CTA or visuals

Problem	Impact
No template library — starts blank every time	Staff spend 20+ minutes per email writing from scratch
[Nome] renders literally (BUG-09)	Every email looks broken and unprofessional to recipients
No CTA button or proposal link (BUG-10)	Recipients have no way to view the proposal or take action
No sender profile selector	All emails come from generic patrocinios@coritiba.com.br, not from a named person
No Send Test to Myself button	No way to verify email appearance before sending to prospects
No open/click tracking displayed	No visibility into whether outreach is working
No pre-send validation	Empty placeholders, missing subject lines, missing CTAs go undetected until after send

5.7 Sponsor Landing Page (/view) — Full Redesign Specification

The sponsor landing page is the most commercially critical external-facing surface in the platform. It is the page a potential R\$200,000/year sponsor sees after receiving a proposal link. The current state — admin sidebar visible, no CTA, no structure — is unacceptable. Currently 0 of 25 best practice checklist items are met (see Section 11).

Section	Content Required	Status
Hero	Full-width image · CFC badge + sponsor logo · Proposal title · Season year · I'm Interested CTA button	Missing
Club Stats Bar	Stadium capacity 40,126 · Average match attendance · TV reach · Total social followers	Missing
The Opportunity	2–3 paragraphs describing the partnership, editable in proposal editor	Missing
Partnership Package	Card grid: each inventory item with photo, description, R\$ value, format	Missing
AI Creatives Gallery	Horizontal scroll of approved AI-generated mockup images for this proposal	Missing
Campaign Concept	AI-generated campaign name, concept, activation ideas from proposal	Missing
Past Partners	Logo wall of previous CFC sponsors · Optional testimonial quote	Missing
CTA Block	3 buttons: I'm Interested · Schedule a Meeting · Download PDF	Missing
Lead Capture Form	Name · Company (pre-filled) · Email · Phone · Message · LGPD notice	Missing

Section	Content Required	Status
Footer	Club name, address, CNPJ, email, phone, social media links	Missing

Technical requirements: Public route (no auth check) · Mobile-responsive · No admin JS loaded · Lazy-loaded images · View counter reported back to platform for each proposal · Unique URL per proposal.

5.8 Navigation & Information Architecture

The sidebar has 20+ items at the same level with no logical grouping. Recommended restructuring:

Group	Items to Include
CRM	Companies · Contacts · Pipeline · Pipedrive Sync
Proposal Workflow	Proposals · Approvals · Campaigns · Bulk Email · Follow-ups
Intelligence	Market Intel · Competitors · Industry Reports · Coritiba Intel · Newsletter
Inventory	Physical Inventory · Digital Inventory · Barter / Procurement · Lei de Incentivo · Brand Assets
Media & Visuals	AI Image Generation · Mockup Editor · Prompt Library · Asset Library
Settings	Team Profiles · Email Config · Integrations · Billing · Audit Log

Additional: Add breadcrumbs to all pages · Improve global search (group results by type) · Add notification bell for system alerts · Add user avatar/menu top-right · Add sidebar collapse to 60px icon mode.

SECTION 6 — COMPLETE KPI FRAMEWORK · 30+ Missing KPIs · Filters · Exports · Labels

The dashboard currently shows 6 operational count metrics. These tell the team what is happening right now but give zero commercial intelligence. Below is the full KPI framework from the perspectives of a McKinsey commercial consultant, business data analyst, commercial strategist, retail strategist, ticketing strategist, and football club CEO.

Currently on Dashboard (6 Total — All Operational Counts, Zero Revenue):

KPI	Current Value	Problem
Active Companies	536	Count only — no revenue, no segment breakdown, no trend
Proposals	123	Count only — no pipeline value, no conversion rate
Campaigns	161	All AI-generated drafts — none activated or tracked
Pending Approvals	15	No breakdown by type, no SLA, no urgency signal
Follow-ups	0	No context — 0 could mean all done or feature broken
System Status	OK	Shows OK despite Gmail expired and Pipedrive broken

6.1 Revenue KPIs — Missing (McKinsey / Commercial Strategist)

KPI	Definition	Where to Show
Total Active Sponsorship Revenue (R\$)	Sum of all signed contract values, current season YTD	Dashboard hero card
Total Pipeline Value (R\$)	Sum of all proposal values in negotiation at any stage	Dashboard + Pipeline page
Revenue vs. Annual Target (%)	Actual contracted R\$ vs. annual commercial plan target	Dashboard — with % bar
Average Deal Size (R\$)	Mean contract value by deal type (Patrocínio/Barter/Lei)	Reports
Revenue by Deal Type	R\$ breakdown: Patrocínio · Barter · Lei de Incentivo · Mídia	Dashboard + Reports
Revenue by Inventory Type	R\$ per asset: jersey · board · social · digital · naming	Reports
Revenue by Industry Vertical	R\$ from each industry: food · finance · automotive · etc.	Reports
Monthly Recurring Revenue (R\$)	Total guaranteed monthly payments from active contracts	Reports
Seasonal Revenue Forecast	Projected end-of-season total based on pipeline + signed contracts	Reports

6.2 Pipeline & Conversion KPIs — Missing (Business Data Analyst)

KPI	Definition	Where to Show
Companies by Pipeline Stage	Count at each stage: Prospect→Contacted→Proposal Sent→Negotiation→Won→Lost	Dashboard + Pipeline
Conversion Rate: Proposals → Contracts (%)	% of sent proposals that result in a signed contract	Dashboard + Reports
Average Time to Close (days)	Mean days from first contact to contract signed	Reports
Proposals Sent This Month	Count of proposals dispatched in current calendar month	Dashboard
Win Rate vs. Loss Rate (%)	% deals won vs. total closed deals	Reports
Lost Deals Analysis	Count + R\$ value of lost deals, by reason and industry	Reports
Follow-up Overdue Count + R\$ at Risk	Proposals with overdue follow-up SLA + their combined pipeline value	Dashboard alert
Top 10 by Pipeline Value	Companies with highest open proposal values	Dashboard sidebar widget
Proposals Viewed by Sponsor	Count of landing page opens, time spent, per proposal	Proposal detail page

6.3 Operational & Outreach KPIs — Missing

KPI	Definition	Where to Show
Email Open Rate (%)	% of sent emails that were opened by the recipient	Email page + Dashboard
Email Click Rate (%)	% of emails where the CTA link was clicked	Email page + Dashboard
Email Deliverability Rate (%)	% of emails that reached the inbox (not bounced/failed)	Dashboard alert — currently ~0% due to OAuth expiry
Sponsor Retention Rate (%)	% of last season's sponsors who renewed this season	Reports
New Sponsors Acquired YTD	Count of first-time sponsors who signed in current year	Dashboard
Sponsor NPS / Satisfaction	Average rating from sponsor feedback surveys	Reports
Image Generation Success Rate	Approved/Total jobs ratio — currently 1 approved of 87 total	Dashboard operational section

KPI	Definition	Where to Show
Pipedrive Sync Status	Last sync time · Pending count · Error count	Dashboard system status

6.4 Inventory KPIs — Missing (Retail & Ticketing Strategist)

KPI	Definition	Where to Show
Inventory Utilization Rate (%)	% of total inventory assets currently under active contract	Inventory page + Dashboard
Available Inventory Value (R\$)	Potential R\$ if all unsold assets were contracted at list price	Inventory page
Inventory Sold Value (R\$)	Total contracted value of currently sold inventory items	Dashboard
Barter Items Total Value (R\$)	Total value of active barter agreements in the system	Reports
Lei de Incentivo Remaining Budget (R\$)	Total Lei de Incentivo budget available vs. contracted this season	Dashboard + Lei de Incentivo module
Media Exposure Value (R\$)	Estimated advertising equivalency value per sponsor placement	Sponsor reports / landing page
Digital Engagement per Sponsor	Social mentions, hashtag reach, story views attributed to activations	Sponsor-specific reports
Activation Delivery Rate (%)	% of contracted activations actually executed vs. committed	Reports — Football Club CEO perspective
Stadium Attendance by Match	Average and peak attendance — feeds sponsorship value calculations	Dashboard + Sponsor reports
Jersey Sponsorship Inventory Status	Which jersey positions are Sold/Available/Reserved with current values	Inventory page

6.5 Filters Needed on Each Major Page

Page	Required Filters
Dashboard	Date range (Week/Month/Quarter/Season/Custom) · Deal type · Assigned team member
Companies	Industry · City/Region · Company size · Pipeline stage · Source (Hunter/Manual/Apollo) · Last contact date range · Has active proposal · Has contract
Proposals	Status (all stages) · Date created range · Date sent range · Deal type · Assigned to · Value range (R\$)
Campaigns	Status · Industry target · Date range · Created by

Page	Required Filters
Emails	Status · Open status · Click status · Campaign · Date sent range
Pipeline	Stage · Assigned to · Value range · Industry · Expected close date range
AI Image Gen	Status (Pending/Approved/Failed/Generating) · Proposal · Campaign · Company · Date created · Model (DALL-E/FLUX)
Inventory	Category (Physical/Digital) · Type · Status (Available/Sold/Reserved) · Price range
Reports	Date range · Deal type · Team member · Industry vertical

6.6 Export Requirements

Dataset	Formats	Key Fields
Companies	CSV, XLSX	Name · CNPJ · Industry · City · Stage · Assigned to · Last contact · Pipeline value
Proposals	CSV, XLSX, PDF	ID · Company · Value · Status · Sent date · Viewed date · Assigned to
Pipeline	CSV, XLSX	All deals by stage with values · Expected close dates · Last activity
Revenue Report	XLSX, PDF	Monthly revenue by deal type by industry vs budget target
Email Campaigns	CSV, XLSX	Campaign name · Sent count · Open rate · Click rate · Bounce rate · Conversion
Inventory	CSV, XLSX	Asset name · Category · Total value · Contracted value · Available value · Utilization %
Lei de Incentivo	XLSX, PDF	Project name · Budget · Raised · Donor list · Law type

6.7 Standard Labels & Categories (Bilingual PT/EN)

Label Type	Portuguese	English
Deal Type	Patrocínio / Permuta / Lei de Incentivo / Mídia / Naming Rights	Sponsorship / Barter / Tax Incentive / Media Trade / Naming Rights
Proposal Status	Rascunho · Aguardando · Aprovado · Enviado · Visualizado · Negociação · Aceito · Assinado · Perdido	Draft · Pending · Approved · Sent · Viewed · Negotiation · Accepted · Signed · Lost
Inventory Type	Uniforme · Placa LED · Digital · Naming · Ativação · Rádio/TV · Coletiva · Museu · Hospitality	Jersey · LED Board · Digital · Naming · Activation · Radio/TV · Press · Museum · VIP
Company Size	Micro · Pequena · Média · Grande · Enterprise	Micro · Small · Medium · Large · Enterprise
Campaign Status	Rascunho · Agendado · Enviando · Concluído · Falhou · Pausado	Draft · Scheduled · Sending · Completed · Failed · Paused

SECTION 7 — FEATURE REQUESTS FR-01 to FR-10 · Full Requirements & Free Tools

FR-01: Bulk Proposals — Individual Company Search + Personalized Emails + Tinder UI

Priority: High	Dev Effort: 2 weeks	Business Value: 10/10
----------------	---------------------	-----------------------

Let the team generate and send personalized sponsorship proposals to dozens of companies in one session, with individual review of each before send.

UI Requirements:

- 1. Search and select target companies via search + filters (industry, city, size, stage)
- 2. System generates one personalized draft email + proposal per company
- 3. Tinder-style review: one card per company — company name, logo, contact, email preview, proposal summary
- 4. Actions per card: Send Now (green) / Edit First (blue) / Skip (gray) / Reject (red)
- 5. Summary before send: '15 to send, 3 to edit, 2 skipped' — user confirms
- 6. Progress bar during bulk send · Failed sends highlighted for manual retry

Free Tools: Framer Motion (swipe animations) · React Hook Form · TanStack Table

FR-02: Team Sender Profile Database

Priority: High	Dev Effort: 2–3 days	Business Value: 9/10
----------------	----------------------	----------------------

A registry of each commercial team member's email, name, title, phone, and LinkedIn — used to personalize outgoing emails and replace the broken [Nome] placeholder.

UI Requirements:

- 1. Settings → Team Profiles → Add Profile
- 2. Fields: Full Name · Title · Email · Phone · LinkedIn URL · Profile Photo · HTML Signature
- 3. Send from dropdown in email composer and campaign builder
- 4. Selected profile auto-inserts name and signature into email

Free Tools: NextAuth (multi-user) · Resend (per-sender email) · React Hook Form

FR-03: Email & Proposal Templates with {{placeholder}} Variables + CTA + Images

Priority: High	Dev Effort: 5–7 days	Business Value: 10/10
----------------	----------------------	-----------------------

A library of pre-designed email and proposal templates where variables like {{nome}}, {{empresa}}, {{valor}} are replaced with real data at send time. Permanently fixes BUG-09 and BUG-10.

UI Requirements:

- 1. Settings → Templates → New Template (Email / Proposal Section / Landing Page Block)
- 2. Block-based WYSIWYG email editor
- 3. Variable insertion: type {{ and a dropdown shows available variables
- 4. Available: {{nome_contato}} · {{empresa}} · {{valor_proposta}} · {{itens}} · {{link_proposta}} · {{nome_gerente}}
- 5. Template preview with sample data filled in · Templates available across all email/proposal/campaign flows

Free Tools: Handlebars.js or Mustache.js (template engine) · React Email · TipTap (rich text editor)

FR-04: Sponsor Landing Page Full Redesign

Priority: High	Dev Effort: 5–7 days	Business Value: 10/10
----------------	----------------------	-----------------------

Complete rebuild of /view/{id} as a standalone, mobile-responsive, sponsor-facing presentation page. Full specification in Section 5.7.

UI Requirements:

- 1. Remove admin layout — apply separate public layout with no sidebar or internal nav
- 2. 10-section page: Hero · Stats Bar · Opportunity · Package · Creatives · Campaign Concept · Past Partners · CTA Block · Lead Form · Footer
- 3. Mobile-responsive · Public route (no auth) · View counter · Unique URL per proposal
- 4. 3 CTA buttons: I'm Interested · Schedule Meeting · Download PDF

Free Tools: Next.js App Router (separate public route) · Tailwind CSS · Framer Motion · react-hook-form

FR-05: Tinder-Style Approval UI

Priority: High	Dev Effort: 5 days	Business Value: 8/10
----------------	--------------------	----------------------

A swipe-based interface replacing the empty Approvals page — one card at a time, fast keyboard-driven review of all pending items.

UI Requirements:

- 1. Stack of cards, one at a time — full context shown per card
- 2. 3 actions: Approve (green ✓ / swipe right) · Reject (red × / swipe left) · Edit (blue pencil)
- 3. Keyboard shortcuts: → Approve · ← Reject · E Edit
- 4. Progress shown: 12 of 47 reviewed
- 5. Separate queues: Campaigns / Emails / Creatives / Proposals
- 6. Review Complete summary after all items processed

Free Tools: Framer Motion (swipe gestures and card stack animation) · React

FR-06: Automated Company Data Enrichment

Priority: Medium	Dev Effort: 5–7 days	Business Value: 8/10
------------------	----------------------	----------------------

When a company is added, auto-fetch logo, LinkedIn, social profiles, website, and generate a Sponsorship Fit Score (1–10).

UI Requirements:

- 1. Background enrichment job triggers on new company save
- 2. Sources: logo.dev (free) · Clearbit free tier · LinkedIn domain search · Hunter.io
- 3. Loading indicator on company card during enrichment
- 4. Auto-fill: logo · LinkedIn URL · social handles · estimated employees
- 5. Sponsorship Fit Score (1–10) based on industry alignment + estimated revenue + past sponsorship signals
- 6. User can override any auto-filled field

Free Tools: logo.dev (free logo API) · Clearbit free tier · RapidAPI enrichment · Hunter.io domain API

FR-07: Weekly Newsletter by Industry Segment

Priority: Medium	Dev Effort: 5–7 days	Business Value: 7/10
------------------	----------------------	----------------------

Automated weekly email newsletter to contacts per industry with club updates and a soft commercial message — keeps CFC top-of-mind.

UI Requirements:

1. Settings → Newsletters → Configure
2. Define segments by industry — one newsletter per segment or one general
3. Template builder: logo · intro text · 2–3 news items · CTA block
4. Schedule: pick day + time for weekly send
5. Auto unsubscribe link in every email
6. Analytics: open rate · click rate · unsubscribes per issue

Free Tools: Resend (free 3,000 emails/month) · React Email · RSS parser for news auto-fill

FR-08: Save Hunter.io/Apollo Contacts to Database

Priority: High	Dev Effort: 1–2 days	Business Value: 9/10
----------------	----------------------	----------------------

Save button on each contact found via Hunter.io or Apollo, linking them to the company record. Fixes BUG-11 permanently.

UI Requirements:

1. Save button per contact row + Save All Found Contacts at top of results
2. On save: create contact record (Name · Email · Title · Source · Date Found) linked to company
3. Already-saved contacts show green Saved badge instead of Save button
4. Contacts tab on company page shows all saved contacts

Free Tools: React · Existing database schema extension

FR-09: Add Competitors' Sponsors to Company Database

Priority: Medium	Dev Effort: 1 day	Business Value: 7/10
------------------	-------------------	----------------------

From the Competitors tab, add any found company directly to the CRM as a prospect with one click.

UI Requirements:

1. Add to My Database button per company row in Competitors view
2. Duplicate check by name or CNPJ — show link if already exists
3. Pre-fill available data · Status: Prospect · Tag: Competitor Sponsor — [Club Name]
4. Added companies immediately appear in Companies list and Pipeline

Free Tools: React · Existing database logic

FR-10: Bilingual Admin Panel (PT/EN Toggle)

Priority: Medium	Dev Effort: 3–5 days	Business Value: 6/10
------------------	----------------------	----------------------

A language toggle in the platform header for the admin panel to display in Portuguese or English — permanently resolves BUG-03's root cause.

UI Requirements:

1. PT | EN toggle button in top header

2. All UI labels, buttons, column headers, status values switch language
3. User language preference saved in profile settings
4. DB field values stored as language-neutral keys — display names come from translation dictionary

Free Tools: [react-i18next \(free\)](#) · [i18next \(translation management\)](#)

SECTION 8 — NEW FEATURE SUGGESTIONS

8.1 Landing Page A/B Testing Module

Create 2–3 versions of the sponsor landing page for the same proposal and automatically show different versions to different recipients. Track which version converts best.

- In proposal editor, click Create A/B Test → enter number of versions (2 or 3)
- Each version is a copy of the landing page — user edits hero text, image, CTA text, or package layout per version
- When proposal link sent to multiple contacts, system randomly assigns each recipient to a version
- Track per version: unique views · CTA button clicks · lead form submissions · meeting requests · PDF downloads
- Dashboard widget shows A/B test results side by side with winner highlighted

8.2 Sponsorship Deck / PDF Output Improvements

Current PDF has admin sidebar in screenshots, no consistent design, missing key stats, no sponsor personalization.

Page	Content
Cover	CFC badge (left) + sponsor logo (right) · Proposal title · Season year · Date · Stadium photo background
Page 2 — Club Profile	Stadium photo · Key stats: capacity, avg attendance, TV matches, social followers, league position · Short club history
Page 3 — Partnership Opportunity	What is being offered · Why sponsor + CFC is a good fit · AI-generated campaign concept headline
Page 4 — Inventory Assets	Each inventory item: photo · asset name · format · placement context · R\$ value. Total package value at bottom
Page 5 — Campaign Concept	AI-generated campaign name · concept paragraph · activation ideas · Campaign theme image
Page 6 — Visual Mockups	AI-generated creatives — jersey mockup · stadium board · social post. Full-page image layout
Page 7 — Commercial Terms	Package value (R\$) · Deal duration · Payment schedule · Barter terms if applicable · Lei de Incentivo eligibility
Page 8 — Next Steps	3 action items · QR code to sponsor landing page · Commercial manager photo + phone + email

8.3 Sponsor Proposal Versioning

Track every change. Save as Version button (auto-versioned v1, v2, v3...). Version history sidebar with date, saved by, and description. Compare view: side-by-side diff of any two versions. Send different versions to different contacts at the same company.

8.4 WhatsApp Integration

Send via WhatsApp button on proposal page. Pre-written message template with proposal link. Track if proposal link was opened after WhatsApp send. Template follow-up sequences: Day 3 / Day 7 automated messages. Falls back to wa.me/ link if WhatsApp API not configured.

8.5 Contract Module

Convert to Contract button on accepted proposals. Contract record: Contract Number · Start/End Date · Total Value · Payment Schedule · Barter Items · Signed PDF upload. Automatic alerts: 60/30/15 days before expiry. One-click Start Renewal Proposal pre-fills new proposal with same inventory and value.

SECTION 9 — DESIGN IMPROVEMENT STRATEGY

9.1 Why Design Matters for This Platform

Sponsors see the landing page: If it looks amateur, they lose confidence in the club's professionalism. A potential R\$200,000/year sponsor associates with a brand they trust. A broken, unstyled page with an admin sidebar sends the opposite message.

The team wastes time instead of selling: Every broken button, unsearchable list, and manual workaround is selling time lost. In a 5–10 person team, every hour saved per person per week translates directly to more proposals sent.

Poor information hierarchy misses critical alerts: The Gmail OAuth expiry has been active for weeks. A well-designed alert system would have surfaced this on day one. Instead it appears in Settings only — a page most team members never visit.

Inconsistency undermines AI output trust: When the platform looks inconsistent and broken, users unconsciously trust AI-generated campaign ideas and creatives less — the platform's most differentiating features.

9.2 Free Tool Recommendations (Claude/AI + Open Source)

Tool	Purpose	Why
ShadCN UI	React component library (free)	Professional, consistent buttons, tables, forms, dialogs, badges. Copy-paste, easy to customize.
Radix UI	Accessible component primitives	Correct keyboard navigation and ARIA — underlying ShadCN.
Tailwind CSS	Utility-first CSS	Enforces the 8px grid system and color system uniformly across all pages.
Lucide Icons	Free icon set (1,000+ icons)	Consistent icons: edit pencil, trash, pipeline, mail, check — all needed here.
Framer Motion	React animation library	Tinder swipe gestures (FR-05), image gen progress, modal transitions, sidebar collapse.
React Hook Form + Zod	Form management + validation	Inline validation — errors show as user types, not on submit.
TanStack Table	Headless table library	Sort, filter, pagination, and export for all list views.
Tremor	Dashboard components (free)	Built-in KPI cards with trend arrows — exactly what is needed.
React Email	HTML email templates in React	Fixes BUG-09 and BUG-10 at the foundation level — email templates are code-based and testable.
Resend	Email API (3,000/month free)	Open and click tracking built in — replaces or supplements Gmail OAuth.
PostHog	Product analytics (free tier)	Track which pages are used most, where users drop off, which features are unused.

9.3 Color System

Role	Color	Hex	Usage
Primary	Coritiba Green	#006400	Primary buttons, active nav, approved status
Primary Light	Light Green	#E8F5E9	Backgrounds for approved/success states
Danger	Red	#DC2626	P0 bugs, delete, errors, rejected status
Warning	Amber	#D97706	P1 bugs, overdue alerts, expiring contracts
Info	Blue	#2563EB	In-progress states, links, information badges
Inactive	Slate	#64748B	Draft/inactive, secondary text, disabled
Background	Off-White	#F8F8F6	Page background — easier on eyes than pure white
Text Primary	Dark	#1A1A1A	Main body text and headings
Text Muted	Medium	#6B7280	Secondary descriptions, timestamps
Border	Light Gray	#E5E7EB	Card borders, table dividers, input borders

Status badge mapping (apply consistently across ALL pages): Draft→Gray · Pending→Amber · Sent→Blue · Viewed→Purple · In Negotiation→Orange · Approved/Won/Active→Green · Lost/Rejected/Failed→Red · Expired→Dark Gray.

9.4 Typography Scale

Style	Size	Weight	Usage
H1 — Page Title	24px	Bold 700	Page titles: Proposals, Dashboard, Companies
H2 — Section Header	18px	SemiBold 600	Section headers within a page
H3 — Card Title	16px	SemiBold 600	Card titles, modal titles, subheadings
Body	14px	Regular 400	Table rows, descriptions, form labels
Label	12px uppercase	Medium 500	Column headers, status badge text
Caption	11px	Regular 400	Timestamps, secondary info, hover tooltips
Button	14px	Medium 500	All button labels

Font: Inter (Google Fonts, free). Line height: 1.5× body, 1.2× headings.

9.5 Spacing & Layout System

Element	Specification
Grid unit	8px — all spacing values are multiples of 8 (8, 16, 24, 32, 48, 64)
Card padding	16px on all sides
Section spacing	24px between sections within a page

Element	Specification
Table row height	44px minimum — comfortable for clicking, readable on tablets
Sidebar width	240px expanded / 60px icon-only collapsed mode
Page content max-width	1280px centered, 24px side padding
Modal max-width	640px for forms / 900px for review/preview modals
Input height	36px standard / 44px primary form inputs

SECTION 10 — DEVELOPMENT ROADMAP · 4 Sprints · 12 Weeks**Sprint 0 — Emergency Fixes (Week 1) — Fix Before Anything Else**

Task	Bug/Issue	Effort
Reconnect Gmail OAuth	System — May 22 expiry	1 hour
Fix Edit button route	BUG-01	30 min
Fix [Nome] placeholder substitution	BUG-09	4 hours
Add proposal link + CTA to email template	BUG-10 (partial)	4 hours
Fix PT/EN language alignment in bulk campaigns	BUG-03 (partial)	1 day
Remove admin sidebar from /view page	BUG-15 (partial)	2 hours

1–2 developers · 3–5 days · Output: Platform's most critical failures patched. Team can send emails that arrive correctly and edit proposals.

Sprint 1 — Core Workflow Unblocked (Weeks 2–3)

Task	Bug/FR	Effort
Add prompt review modal to Generate Creatives	BUG-08	2 days
Clear stuck generation jobs + fix timeout	BUG-08	1 day
Save Hunter.io/Apollo contacts to DB	BUG-11 / FR-08	2 days
Build basic image management workspace	BUG-IMAGES	3 days
Fix Approvals page query	BUG-04	4 hours
Fix Pipedrive sync (token + field mapping)	BUG-06	2 days
Add company search to campaign selector	BUG-03 / BUG-14	1 day
Team sender profiles	FR-02	2 days

2 developers · 10 days · Output: Full end-to-end proposal workflow is functional. Emails arrive with correct names and links. Images generate with prompt review. CRM syncing with Pipedrive.

Sprint 2 — UX Overhaul + KPI Dashboard (Weeks 4–6)

Task	Section/FR	Effort
Dashboard redesign with all KPIs + alert system	Section 5.2, Section 6	4 days
Redesign image generation flow (6-step)	Section 5.4	4 days
Redesign email composer (visual block builder)	Section 5.6	3 days
Email + proposal templates with {{variables}}	FR-03	3 days
Tinder-style approvals UI	FR-05	3 days
Add filters + sort to all list pages	Section 6.2	2 days
Add breadcrumbs + restructure sidebar IA	Section 5.8	1 day

2 developers + 1 designer · 15 days · Output: Internal UX is professional and fast. Team sees real business performance data. Approvals are visual and fast.

Sprint 3 — Sponsor-Facing Quality (Weeks 7–9)

Task	Section/FR	Effort
Sponsor landing page full redesign	Section 5.7, FR-04	5 days
Redesign mockup editor	Section 5.5	4 days
PDF sponsorship deck redesign (8 pages)	Section 8.2	3 days
Landing page A/B testing module	Section 8.1	3 days
Add competitors to DB (BUG-12/FR-09)	FR-09 / BUG-12	1 day
Inline industry edit + auto-label (BUG-13)	BUG-13	2 days
Proposal versioning	Section 8.3	3 days

2 developers + 1 designer · 15 days · Output: Every external touchpoint (email, landing page, PDF, mockups) is professional-grade.

Sprint 4 — Intelligence & Automation (Weeks 10–12)

Task	FR/Section	Effort
Automated company data enrichment	FR-06	5 days
Weekly newsletter module	FR-07	4 days
Bilingual PT/EN admin panel	FR-10	3 days
Bulk proposals with Tinder UI	FR-01	8 days
Contract module	Section 8.5	5 days

Task	FR/Section	Effort
WhatsApp integration	Section 8.4	3 days

3 developers · 15 days · Output: Platform moves from reactive to proactive. Team handles 5× pipeline volume with same headcount.

Total estimated timeline: 12 weeks with 2–3 developers and 1 designer working in parallel on Sprints 2–4.

SECTION 11 — LANDING PAGE BEST PRACTICES CHECKLIST · 25 Items · 0 Currently Met

Every item below is a documented best practice for B2B sponsorship landing pages. Current status: 0 of 25 met.

#	Item	Why It Matters	Status
1	No admin navigation visible on the page	Prevents sponsor from seeing internal tools; looks professional	NO
2	Club + sponsor logo both in the hero	Reinforces partnership concept visually — sponsor must see their brand	NO
3	Headline states value proposition in one sentence	Sponsor must immediately understand what is being offered	NO
4	Audience reach stats shown above the fold	Stadium/TV/social numbers justify the sponsorship value instantly	NO
5	Package contents listed with photos, not just text	Visual inventory is far more persuasive than a text list	NO
6	At least one AI-generated creative mockup	Helps sponsor visualize their brand at the stadium	NO
7	Price/value shown (or clear Request Pricing CTA)	Sponsors want to know the investment level quickly	NO
8	Social proof: past sponsor logos or testimonial	Reduces risk — if X brand trusted CFC, this is credible	NO
9	Primary CTA visible without scrolling	Reduces friction for interested sponsors — always visible	NO
10	CTA is specific: I'm Interested, not Contact Us	Specific language converts better than generic CTAs	NO
11	Lead capture form is short (4 fields max)	Every additional field reduces completion rate by ~10%	NO
12	Meeting scheduling option (Calendly or native)	Removes email back-and-forth from the conversion path	NO
13	PDF download available without login	Many decision-makers share proposals internally as PDFs	NO
14	Page is fully mobile-responsive	50%+ of email links opened on mobile — must look correct	NO
15	Page loads under 3 seconds	Every second of load time reduces conversion by ~7%	UNKNOWN
16	Unique URL per proposal	Enables tracking; prevents one sponsor seeing another's proposal	PARTIAL

#	Item	Why It Matters	Status
17	View tracking: team knows when page was opened	Enables timely follow-up: 'I see you looked at the proposal'	NO
18	No placeholder text or broken images	Broken placeholders destroy credibility immediately	NO (BUG-09)
19	Footer with club contact + social links	Sponsors can reach team through any channel	NO
20	LGPD notice on lead capture form	Legal compliance for collecting Brazilian personal data	NO
21	Page title and meta description set	If sponsor shares link in WhatsApp, it shows a clean preview	NO
22	Approved AI creatives in a gallery	Shows creative capability; helps sponsor visualize activation	NO
23	Campaign concept text shown	Differentiates from a boring PDF — shows thought and creativity	NO
24	Page in Portuguese for Brazilian sponsors	Removes language friction with local prospects	NO
25	Expiry date on the proposal	Creates urgency — 'Reserved until [date]' increases response	NO

0 of 25 items currently met. All 25 will be achieved after Sprint 3 sponsor landing page redesign.

SECTION 12 — PRIORITY SUMMARY TABLES

Table 1: All Bugs by Priority

Bug ID	Title	Priority	Effort	Business Impact
BUG-01	Edit button → wrong page	P0	30 min	Cannot edit any proposal
BUG-03	Bulk campaigns 100% fail (PT/EN)	P0	1–2 days	Bulk outreach completely broken
BUG-08	Generate Creatives: no prompt, 28 stuck	P0	2–3 days	No working image generation
BUG-09	[Nome] renders literally in emails	P0	1 day	Every email looks broken
BUG-10	Emails: no link, no image, no CTA	P0	2–3 days	Every email is a dead end
BUG-11	Hunter.io contacts: no Save button	P0	1–2 days	All found contacts lost
BUG-IMAGE S	Bulk Approve: Sem img everywhere	P0	3–5 days	Proposals go out without visuals
BUG-15	Sponsor /view: admin sidebar + no CTA	P0	1–2 days + redesign	Sponsors see broken internal tool
BUG-04	Approvals page completely empty	P1	4 hours	No quality control workflow
BUG-06	Pipedrive: 0 synced, 35 pending	P1	1–2 days	CRM disconnected
BUG-12	Competitors: no Add to DB button	P1	1 day	Intelligence not actionable
BUG-14	Campaign selector: no search at 300+	P1	4–8 hours	Feature practically unusable
BUG-13	Industry field not inline-editable	P2	1–2 days	Poor segmentation data

Table 2: Feature Requests — Priority & Business Value

FR ID	Feature	Priority	Effort	Value (1–10)
FR-01	Bulk Proposals — Tinder UI + personalized emails	High	2 weeks	10
FR-02	Team Sender Profile Database	High	2–3 days	9
FR-03	Email & Proposal templates with {{variables}}	High	5–7 days	10

FR ID	Feature	Priority	Effort	Value (1–10)
FR-04	Sponsor Landing Page full redesign	High	5–7 days	10
FR-05	Tinder-style Approval UI	High	5 days	8
FR-06	Automated company data enrichment	Medium	5–7 days	8
FR-07	Weekly Newsletter by industry segment	Medium	5–7 days	7
FR-08	Save Hunter.io/Apollo contacts to DB	High	1–2 days	9
FR-09	Add competitors' sponsors to DB	Medium	1 day	7
FR-10	Bilingual PT/EN admin panel	Medium	3–5 days	6

Table 3: Top 10 KPIs to Add First

Rank	KPI	Why First	Where
1	Total Active Sponsorship Revenue (R\$)	Core commercial number — everyone asks this	Dashboard hero
2	Total Pipeline Value (R\$)	Forecasts future revenue — critical for planning	Dashboard
3	Email Deliverability Rate	Currently ~0% due to OAuth expiry — must alert	Dashboard alert
4	Proposals Sent This Month	Team activity baseline — measures output	Dashboard
5	Conversion Rate: Proposals → Contracts (%)	Shows if the workflow is actually working	Dashboard
6	Follow-up Overdue Count + R\$ at Risk	Prevents deals dying silently	Dashboard alert
7	Email Open Rate / Click Rate	Measures outreach effectiveness	Dashboard + Emails
8	Companies by Pipeline Stage (funnel)	Shows where deals get stuck	Pipeline page
9	Inventory Utilization Rate (%)	Shows how much commercial inventory is sold	Inventory + Dashboard
10	Lei de Incentivo Remaining Budget (R\$)	Unique, time-sensitive opportunity	Dashboard

Table 4: Development Roadmap Summary

Sprint	Duration	Focus	Key Output	Team
Sprint 0	Week 1	Emergency fixes	Gmail fixed · Edit button fixed · Emails work · /view has no sidebar	2 devs
Sprint 1	Weeks 2–3	Core workflow	Image gen + prompt review · Contacts save · Approvals work · Pipedrive syncs	2 devs
Sprint 2	Weeks 4–6	UX + KPIs	10+ KPIs dashboard · Visual email builder · Tinder approvals · All filters	2 devs + designer
Sprint 3	Weeks 7–9	Sponsor-facing	Professional landing page · Mockup editor · PDF deck · A/B testing	2 devs + designer
Sprint 4	Weeks 10–12	Automation	Enrichment · Newsletter · Bilingual · Bulk proposals · Contract module	3 devs

SECTION 13 — PIPEDRIVE MCP INTEGRATION · Full CRM Automation for Sponsorship

Current State

Pipedrive shows 0 synced records and 35 pending. The pipeline board is 100% empty despite 536 companies and 126 proposals in the platform. This is BUG-06 and it kills forecasting, follow-ups, and revenue visibility.

What is Pipedrive MCP?

Model Context Protocol (MCP) is Anthropic's open standard for connecting AI assistants directly to external services. A Pipedrive MCP server lets Claude (already powering this platform via AWS Bedrock) read and write CRM data through natural language — no manual API calls, no middleware. Open-source implementations exist with 40–155 tools, MIT licensed, free to self-host.

13.1 Recommended MCP Server

Option	Tools	API Version	Auth	Best For
ckalima/pipedrive-mcp-server	155	v2-first, v1 fallback	API key or OAuth	Full feature coverage · 1,700+ CI tests

Option	Tools	API Version	Auth	Best For
iamsamuelfraga/mcp-pipedrive	100+	v1 + v2	API key	Rate limiting, caching, TypeScript types
teapot-agency/mcp_pipedrive	40	v1	API key or JWT	Lightweight, Docker-ready, SSE transport

Recommendation: use `kcalima/pipedrive-mcp-server` (MIT, contract-tested against Pipedrive OpenAPI v2 spec). Configure via `.mcp.json` with `PIPEDRIVE_API_TOKEN`. Destructive operations (delete/convert) are OFF by default — only reads and creates enabled until you explicitly opt in.

13.2 All Tools / Capabilities Available

Entity	Read Operations	Write Operations
Deals	Get deal, list deals, search deals, get deal notes, deal history, custom fields	Create deal, update deal, move to stage, log activity on deal, delete (opt-in)
Persons / Contacts	Get person, list persons, search by name/email/phone/org, fuzzy match, full custom fields	Create person, update person, merge duplicates, delete (opt-in)
Organizations	Get org, list orgs, search by name/address, full custom fields	Create org, update org, add custom fields, delete (opt-in)
Pipelines	List pipelines, get pipeline, get stages, compare pipelines	Create pipeline, update pipeline, add stage, update stage, delete (opt-in)
Activities	Get activities, filter by person/deal/org/date, activity types	Create activity (call/meeting/task/email/demo), update, delete (opt-in)
Leads	Search leads, list leads, get lead details	Create lead, update lead, convert lead to deal, delete (opt-in)
Notes	Get note, list notes per deal/person/org	Create note, update note, delete (opt-in)
Products	Get product, list products, get pricing	Add product to deal, create product, update product
Mail	Get mail threads per deal/person, read email history	(Send handled via platform email composer)
Users	List users, get user profile, check permissions	Invite user (admin only)
Custom Fields	List all custom field definitions, get values	Create custom field, update field value on any entity

13.3 Sponsorship-Specific Workflows to Build

Workflow	Trigger	MCP Actions	Result
New Company → Pipedrive Lead	Company added in platform	create-organization → create-lead → create-activity (initial outreach)	Lead appears in Pipedrive instantly with org linked

Workflow	Trigger	MCP Actions	Result
Proposal Sent → Deal Created	Proposal status = Sent	create-deal (title=company+package, value=R\$, pipeline=Sponsorships) → create-note (proposal link)	Deal at Stage 1 with full proposal context
Proposal Viewed → Activity Logged	Landing page /view opened	create-activity (type=email-open, desc=sponsor viewed proposal) → update-deal (last activity)	Sales team sees real engagement signal
Follow-up Overdue → Alert	No activity > 7 days on open deal	get-deals (filter: no activity > 7d) → create-activity (task: follow up)	Automatic follow-up task assigned
Proposal Accepted → Close Deal	Sponsor clicks Accept / signs contract	update-deal (status=won, value=final R\$) → create-note (contract ref)	Pipeline reflects closed revenue immediately
Proposal Rejected → Move Stage	Sponsor declines or no response 30d	update-deal (stage=lost, lost-reason=category) → create-note	Lost reason data for analysis
Lei de Incentivo Interest	Company flags Ldl interest	update-deal (custom field: Ldl=true, project=name) → create-activity (task: send Ldl docs)	Ldl pipeline filterable in Pipedrive
Barter Agreement	Barter deal created	update-deal (custom field: type=barter, product=item, value=R\$ equivalent)	Barter tracked as pipeline value
Newsletter Engagement → Deal Update	Sponsor clicks link in newsletter	create-activity (type=email-click, deal linked) → update-deal (engagement score++)	Warm leads surface automatically
Contract Renewal Alert	60 days before contract end	search-deals (filter: close-date < 60d) → create-activity (task: start renewal proposal)	No renewal missed

13.4 Pipeline Structure to Build in Pipedrive

Pipeline	Stages	Custom Fields Required
Patrocínio Direto (Direct Sponsorship)	1-Prospecção → 2-Proposta Enviada → 3-Em Negociação → 4-Aprovação Interna → 5-Contrato Assinado → Won/Lost	Inventory Package · R\$ Value · Contract Start/End · Category · Decision Maker Name
Lei de Incentivo	1-Qualificação → 2-Apresentação Projeto → 3-Análise Legal → 4-Aprovação → Won/Lost	Ldl Project Name · Incentive Budget R\$ · Deadline · Legal Contact

Pipeline	Stages	Custom Fields Required
Barter	1-Avaliação → 2-Proposta Barter → 3-Aprovação → Won/Lost	Barter Product/Service · Estimated R\$ Value · Delivery Terms · Counterpart Asset
Renovação (Renewal)	1-Alerta Renovação → 2-Proposta Enviada → 3-Negociação → Won/Lost	Previous Contract Ref · Renewal Value · Change From Last Year · Expiry Date

13.5 KPIs Pipedrive MCP Enables

KPI	MCP Query	Dashboard Widget
Total Pipeline Value R\$	get-deals (status=open) → sum values	Big number card top of dashboard
Win Rate % by Pipeline	get-deals filter won vs total per pipeline	Bar chart per pipeline type
Avg Deal Cycle (days)	won deals: created_date vs close_date avg	KPI card + trend
Deals Going Cold (>7d no activity)	get-deals + get-activities filter	Alert list with R\$ at risk
Revenue Forecast This Quarter R\$	open deals × probability by stage	Forecast card
Conversion per Stage (%)	deals per stage / deals entering stage	Funnel chart
Ldl Pipeline Total R\$	get-deals filter pipeline=Ldl, status=open	Dedicated Ldl widget
Barter Value Locked R\$	get-deals filter pipeline=Barter	Barter inventory widget
Follow-up Compliance Rate	activities created within 48h of deal update	Team health score
Renewal Rate %	won renewals / total renewals due	Retention KPI

13.6 Implementation Requirements

Requirement	Detail	Effort
Fix BUG-06 first	Diagnose why sync returns 0 — likely broken API token or wrong domain in config	4 hours
Install MCP server	npm install + .mcp.json config with PIPEDRIVE_API_TOKEN + domain	2 hours
Create 4 pipelines	Direct Sponsorship / Ldl / Barter / Renewal — with all custom fields per 13.4	4 hours
Build sync triggers	Platform events (proposal sent, viewed, accepted) → MCP write calls	3–5 days
Build pull dashboard	Pipedrive MCP queries → platform dashboard KPI widgets per 13.5	3–4 days

Requirement	Detail	Effort
Build cold deal alert	Scheduled job: query Pipedrive daily, flag deals > 7d no activity	1–2 days
Build renewal alerts	Scheduled job: query deals closing < 60d, create renewal task	1 day
Custom field mapping	Map platform Inventory/Ldl/Barter fields → Pipedrive custom fields	1 day
User access setup	One Pipedrive API token per team member role or shared company token	2 hours

SECTION 14 — NEWSLETTER MODULE · Full Requirements & Architecture

Current State

FR-07 (Weekly Newsletter by Industry Segment) exists in the feature backlog but has 0 implementation. The platform can send individual proposal emails (when Gmail OAuth is working) but has no broadcast newsletter system, no subscriber list, no template editor, no analytics, and no scheduling. This section defines the complete module.

14.1 Architecture Overview

Component	Function	Free Tool Recommendation
Template Builder	Drag-and-drop email block editor	React Email + Unlayer (free tier) or MJML
Subscriber Lists	Segmented contact groups from platform database	Built-in (query companies by industry/category)
Send Engine	Bulk delivery with tracking	Resend (free: 3,000/month) or Mailgun (5,000/month free)
Analytics Engine	Open rate, CTR, unsubscribes, bounce	Resend built-in + PostHog events
Scheduler	Define send day/time, recurring cadence	Platform cron job (node-cron or pg_cron)
Unsubscribe Manager	One-click unsubscribe, legal LGPD/CAN-SPAM compliance	Built-in list preference center
Pipedrive Sync	Log newsletter opens/clicks as activities on deals	Pipedrive MCP (Section 13)
Personalization Engine	{{first_name}}, {{company}}, {{category}}, {{custom_offer}}	Handlebars or Mustache (free)
A/B Testing	Subject line and content variants per segment	Built-in split logic + PostHog feature flags

14.2 Subscriber List Management

Lists are auto-built from the company database. Manual lists can also be created. Every contact must have explicit opt-in status for LGPD compliance.

List Type	Source	Segment Filters Available	Expected Size
By Industry	Company DB → industry field	Industry · Region · Company Size · Contact Role	Varies
Active Prospects	Pipedrive open deals → persons linked	Stage · Pipeline Type · Last Activity	Dynamic

List Type	Source	Segment Filters Available	Expected Size
Current Sponsors	Contracts module / Sponsor Reports	Contract Value · Category · Renewal Date	3+ today
Lapsed / Cold	Pipedrive lost deals + no activity > 60d	Lost Reason · Days Since Last Contact	Dynamic
Lei de Incentivo	Companies flagged Ldl=true in Pipedrive	Project · Budget Range	Dynamic
Barter Candidates	Companies in Barter pipeline	Product Category · Trade Value	Dynamic
Manual List	Admin uploads CSV or hand-selects	Any combination	Flexible

14.3 Newsletter Types to Create

Newsletter Type	Audience	Cadence	Content
Coritiba Weekly	All active prospects	Weekly — Tuesday 9am	Match results · Upcoming fixtures · Sponsorship highlight · CFC stat of the week · One featured package
Industry Spotlight	One industry per send (rotating)	Bi-weekly	Category-specific audience stats · Case study from same industry · Tailored package offer
Sponsor Update	Current sponsors only	Monthly	ROI report · Social reach numbers · Upcoming activation calendar · Renewal reminder if < 90d
Lei de Incentivo Digest	Ldl pipeline contacts	Monthly	Project progress update · Remaining budget · Tax benefit calculation · Deadline alert
Re-engagement	Cold leads > 60 days	One-time trigger	We miss you message · New season offer · Limited-time discount or barter opportunity
Match Day Bulletin	All prospects + media	Match day (38+/-season)	Starting XI · Sponsor visibility stats preview · Live social engagement · Post-match summary

14.4 Email Template Structure (Block Builder)

Block	Content	Personalization Variables	Required?
Header	CFC logo + club colors + season year	None	Yes
Hero Banner	Match photo or stadium image + headline	{{newsletter_headline}}	Yes
Intro Text	1–2 sentence personal opener	{{first_name}}, {{company}}	Yes

Block	Content	Personalization Variables	Required?
Stats Block	3 KPI tiles: followers, attendance, TV reach	Dynamic from platform config	Yes
Featured Package	Inventory item card: name · price · availability	{{package_name}}, {{price_r\$}}, {{cta_url}}	Conditional
Social Proof	Current sponsors logos strip	Dynamic from Sponsor Reports	Recommended
Match Block	Next fixture card: opponent · date · venue · expected TV	Dynamic from calendar integration	Conditional
CTA Button	Primary action button	{{cta_label}}, {{cta_url}} → landing page or calendar	Yes
Barter / Ldl Block	Special offer or legal incentive note	{{offer_type}}, {{deadline}}	Conditional
Unsubscribe Footer	One-click unsubscribe + LGPD notice	{{unsubscribe_url}}, {{company_address}}	Yes — legal

14.5 Send Flow (Step by Step)

Step 1 — Choose Type: Select newsletter type: Weekly / Industry / Sponsor Update / Ldl / Re-engagement / Match Day

Step 2 — Select List: Choose one or more subscriber lists. System shows count of valid emails and opt-in status.

Step 3 — Build Content: Drag-and-drop blocks. Upload or select hero image. Fill in text. Preview on mobile + desktop side by side.

Step 4 — Personalize: Insert {{variables}} from the variable picker. System shows a preview rendered with a sample contact.

Step 5 — Subject Line: Enter subject line. Add a B variant for A/B test (optional). Preview how it looks in Gmail vs Outlook.

Step 6 — Tinder Review: Swipe-style approval: one card per email variant. Approve to include, reject to remove or edit before send.

Step 7 — Schedule or Send: Send now OR choose date + time. System shows best send time recommendation based on past open rates.

Step 8 — Delivery Monitor: Real-time delivery dashboard: sent · delivered · bounced · opened · clicked · unsubscribed.

Step 9 — Pipedrive Sync: All opens and clicks automatically logged as activities on matching deals via MCP.

Step 10 — Report: 48h post-send report: open rate · CTR · replies · leads generated · deals moved in pipeline.

14.6 Complete KPI Framework for Newsletter

KPI	Formula / Source	Target Benchmark	Where to Show
Delivery Rate	Delivered / Sent × 100	> 98%	Send report header

KPI	Formula / Source	Target Benchmark	Where to Show
Open Rate	Unique opens / Delivered × 100	> 25% (B2B sports avg)	Send report + campaign list
Click-Through Rate (CTR)	Unique clicks / Delivered × 100	> 3–5%	Send report
Click-to-Open Rate (CTOR)	Clicks / Opens × 100	> 15%	Advanced analytics tab
Unsubscribe Rate	Unsubs / Delivered × 100	< 0.5%	Send report + alert if > 1%
Bounce Rate (Hard)	Hard bounces / Sent × 100	< 0.5%	List health dashboard
List Growth Rate	(New subs – Unsubs) / List size × 100 per month	Positive month-over-month	Lists overview
Revenue per Email	Deals closed attributed to newsletter / Emails sent	Track trend	Advanced analytics
Conversion Rate	Landing page visits from email / Clicks × 100	> 10%	Campaign analytics
Subject Line Score	A/B winner open rate vs baseline	Continuous improvement	A/B test results panel
Best Send Time	Open rate by day-of-week + hour-of-day	Optimize per segment	Scheduler suggestion
Spam Score	SpamAssassin or Resend spam check on template	< 2.0	Pre-send checklist
Pipedrive Activity Rate	% of newsletter recipients with a Pipedrive activity created post-send	> 5% warm signals	CRM integration panel
ROI	Revenue attributed to newsletter campaigns / Send cost	Track monthly	Executive dashboard

14.7 LGPD / Legal Compliance Requirements

Requirement	Implementation
Explicit opt-in	Checkbox on all lead capture forms + Hunter.io/Apollo import wizard with consent timestamp
Opt-in timestamp	Store: email, date/time, source, IP address per contact
One-click unsubscribe	Unique unsubscribe URL per contact in every email footer — auto-suppresses from all lists
Preference center	Page where contact chooses which newsletter types to receive (granular opt-out)
Data retention policy	Clearly state how long data is kept — visible in footer
Sender identity	From: must be verified domain (no Gmail) — use platform email domain

Requirement	Implementation
Physical address	Coritiba FC address in every footer — required by CAN-SPAM and LGPD
Suppression list	Hard bounces + unsubscribes permanently suppressed — never re-added automatically

14.8 Technical Implementation Requirements

Component	Requirement	Effort
Database schema	newsletters table · newsletter_lists · list_members · send_events · open_events · click_events · unsubscribes	1 day
Template builder UI	Block editor with drag-and-drop — use Unlayer React (free) or build with ShadCN + custom blocks	1–2 weeks
Variable system	{{variable}} syntax with live preview — Handlebars.js (free)	2–3 days
Send engine	Resend API for transactional/bulk (3k/month free) — add SPF/DKIM records to domain	2–3 days
Tracking pixels	1x1 pixel open tracking · link wrapping for click tracking · UTM params auto-injected	2–3 days
Scheduler	node-cron or pg_cron — define send time per newsletter type	1 day
Unsubscribe endpoint	GET /unsubscribe?token=xyz → instant opt-out + confirmation page	1 day
Analytics dashboard	Per-send report + aggregated analytics — use Tremor components (free)	3–4 days
A/B test engine	Random recipient assignment to variant A or B · winner detection after 24h	2–3 days
Pipedrive MCP sync	Post webhook: open/click event → MCP create-activity on linked deal	2–3 days
Spam checker	Pre-send SpamAssassin score check via API	4 hours
Mobile preview	Side-by-side desktop + mobile preview in template editor	1 day

14.9 Sprint Plan for Newsletter Module

Sprint	Tasks	Output
Sprint 4 (Weeks 10–12) — already planned	Fix Gmail OAuth first (BUG-01 equivalent) · Install Resend SDK · Build basic send engine · Subscriber list from company DB	Can send simple text newsletters to segmented list

Sprint	Tasks	Output
Sprint 5 (Weeks 13–15)	Build block template editor · Add {{variables}} + preview · Open/click tracking pixels · Unsubscribe endpoint + LGPD footer	Full branded newsletters with personalization and legal compliance
Sprint 6 (Weeks 16–18)	Analytics dashboard · A/B subject line testing · Scheduler (define cadence per type) · Spam score check pre-send	Scheduled recurring newsletters with full performance reporting
Sprint 7 (Weeks 19–21)	Pipedrive MCP activity sync on open/click · Match Day bulletin automation · Re-engagement sequence triggers	Full CRM-connected newsletter automation — hot leads surface in Pipedrive automatically
